Design Document

* Project description
- The personal website that serves as a centralized platform showcasing my resume, skills, projects, and contact details.
- The website will use technologies such as HTML5, CSS3, JavaScript, and Bootstrap to provide an engaging user experience.

* User Personas
- Recruiters who want to find potential candidates with the necessary skill sets.
- Classmates and friends who would like to know more about me.

* User stories (use cases but with a story)
- As a recruiter, I want to easily find and review the candidate's resume so that I can quickly understand their professional background.
- As a classmate/friend, I want to explore the projects undertaken by the individual so that I can have a clear understanding of their skills.

* Design mockups
- Figma is used to create visual representations of the web pages.
- There are a total of four pages on the website:
  - Homepage: The index page featuring a simple introduction.
  - About Page: Displaying the skills I am familiar with.
  - Resume Page: Detailing my educational background and past projects.
  - Contact Page: Providing contact details for users to easily get in touch.
